

Mike R. Jeffrey

Hidden Dynamics

The mathematics of switches, decisions,
& other discontinuous behaviour

Contents

Preface	
Chapter outline	
1 Origins of Discontinuity	1
1.1 Discontinuities and dynamics	2
1.2 Discontinuities and determinism	5
1.3 Discontinuities in approximations	7
1.4 Discontinuities in physics and other disciplines	10
1.4.1 In mechanics: collisions and contact forces	12
1.4.2 In optics: illuminating a Victorian discontinuity	14
1.4.3 In sound: wave fronts and shocks	15
1.4.4 In graphs: sigmoid transition functions	18
1.5 “Can’t we just smooth it?” (and other fudges)	20
1.6 Discontinuities and simulation	21
1.7 Discontinuity in dynamics: a brief history	26
1.8 Looking forward	30
2 One Switch in the Plane: A Primer	31
2.1 The elements of piecewise-smooth dynamics	32
2.2 The value of $\text{sign}(0)$: an experiment	37
2.3 Types of dynamics: Sliding and Crossing	38
2.4 The switching layer and hidden dynamics	41
2.4.1 A note on modeling basic oscillators	47
2.5 Local singularities and bifurcations	48
2.5.1 Equilibria and local stability	48
2.5.2 Tangencies and their bifurcations	50
2.5.3 Equilibria, sliding equilibria, and their bifurcations ...	52
2.6 Global bifurcations and tangencies	53
2.7 Determinacy-breaking – a first glimpse	56
2.8 Counting limit cycles	56

2.9	Looking forward.....	60
3	The Vector Field: Multipliers & Combinations.....	61
3.1	Piecewise smooth vector fields.....	62
3.2	The discontinuity surface.....	63
3.3	Constituent fields and indexing.....	64
3.4	The switching layer.....	67
3.5	Inclusions, and existence of a flow.....	69
3.6	Looking forward.....	72
4	The Flow: Types of Solution.....	73
4.1	Indexing.....	74
4.2	Types of trajectory.....	74
4.3	Determinacy breaking events.....	80
4.4	Equivalence and stability.....	83
4.5	Prototypes.....	88
4.6	Flow derivatives.....	89
4.7	Looking forward.....	89
5	The Vector Field Canopy.....	91
5.1	The vector field canopy.....	92
5.1.1	The canopy for one switch.....	93
5.1.2	The canopy for two switches.....	94
5.1.3	The canopy for m switches.....	95
5.2	Deriving the canopy.....	95
5.2.1	Joint expansions and matching.....	95
5.2.2	Series of signs.....	97
5.2.3	Uniqueness of the multilinear term.....	99
5.3	Looking forward.....	101
6	Tangencies: The Shape of the Discontinuity Surface.....	103
6.1	Flow tangencies.....	104
6.2	Folds ($d = 2, k = 2$).....	109
6.3	Two-folds ($d = 3, k = 3$).....	110
6.4	Cusps ($d = 3, k = 2$).....	112
6.5	Swallowtail ($d = 4, k = 2$).....	114
6.6	Umbilics: lips and beaks ($d = 4, k = 2$).....	115
6.7	Fold-cusp ($d = 4, k = 3$).....	117
6.8	Many-fold singularities, cusp-cusps, and so on.....	118
6.9	Proofs of leading order expressions for the fold and two-fold..	119
6.10	A note on alternative classifications.....	123
6.11	Looking forward.....	124

7	Layer Analysis	125
7.1	The sliding manifold	126
7.1.1	A special case: “higher order” sliding modes	131
7.2	The sliding region’s attractivity	131
7.3	Singularities of the sliding manifold \mathcal{M}	134
7.4	End points of the sliding region	138
7.5	Multiplicity and attractivity of sliding modes	140
7.5.1	One switch, multiple sliding modes	141
7.5.2	Multiplicity of sliding modes at intersections	143
7.5.3	Classification of sliding modes/equilibria	146
7.6	Layer variables	149
7.7	Equilibria & sliding equilibria	154
7.8	Invariant subspaces	159
7.9	Bifurcations of equilibria & sliding equilibria	160
7.10	A saddlenode/persistence criterion	167
7.11	Looking forward	168
8	Linear Switching (local theory)	169
8.1	The sliding manifold	170
8.2	The convex combination	171
8.3	Equilibria & sliding equilibria	172
8.4	Boundary equilibrium bifurcations	173
8.4.1	One-parameter BEBs in the plane	173
8.5	Boundaries of sliding: for a single switch	178
8.5.1	Folds	180
8.5.2	Two-folds	181
8.5.3	Cusps	183
8.5.4	Swallowtail	184
8.5.5	Umbilics	186
8.5.6	Fold-cusp	188
8.6	Bifurcations of sliding boundaries in the plane	190
8.7	Boundaries of sliding: for r switches	193
8.8	The hidden degeneracy of linear switching	196
8.9	Piecewise-smooth time rescaling	197
8.10	Looking forward	198
9	Nonlinear Switching (local theory)	199
9.1	Nonlinear sliding	200
9.2	Hidden attractors	202
9.2.1	A hidden Van der Pol oscillator	202
9.2.2	Hidden Duffing oscillator and Ueda chaos	204
9.2.3	Cross-talk oscillations	207
9.2.4	Hidden Lorenz attractor	210
9.3	Hidden bifurcations	212
9.3.1	Cross or not at an intersection	212

9.4	The illusion of noise	214
9.4.1	Jitter	214
9.4.2	Slip Cascades	216
9.4.3	Switching with time dependence	219
9.5	Nonlinear switching as a small perturbation	222
9.5.1	Crossing	223
9.5.2	Sliding	225
9.5.3	Structural stability of the sliding manifold	226
9.6	Hidden degeneracy at local bifurcations	229
9.6.1	Boundary node flip	230
9.6.2	Fold-fold and flip	234
9.7	Looking forward	239
10	Breaking Determinacy	241
10.1	Exit points	242
10.2	Exit points: deterministic	242
10.2.1	Exit via a simple tangency	242
10.2.2	Exit transverse to an intersection	243
10.2.3	Exit via tangency to an intersection	245
10.3	Exit points: determinacy-breaking	248
10.3.1	Exit transverse to an intersection	249
10.3.2	Exit via a complex tangency	255
10.3.3	Zeno exit from an intersection	261
10.3.4	Exit from a sliding fold	267
10.4	Stranger attractors	268
10.5	Looking forward	270
11	Global Bifurcations & Explosions	271
11.1	Local classification of global phenomena	272
11.2	The sliding eight	274
11.3	Sliding bifurcations/explosions – the global picture	277
11.4	Sliding bifurcations/explosions in nonlinear switching	284
11.5	The classification & its completeness	287
11.5.1	Unfoldings	289
11.5.2	Classes of sliding bifurcation	290
11.5.3	Classes of sliding explosion	297
11.5.4	The omitted singularities	300
11.6	Codimension two sliding bifurcations & explosions	300
11.7	Maps	301
11.8	Looking forward	304
12	Asymptotics of Switching: Smoothing & Other Perturbations	305
12.1	Probabilistic switching	306
12.1.1	Multiplying probabilities in the combination	307

12.1.2	The unreasonable effectiveness of nonsmooth models . .	309
12.2	Convex switching	312
12.2.1	Experiments on convex switching	313
12.2.2	Conclusion: Jitter over the convex hull	318
12.3	Smooth switching	319
12.3.1	Why smooth?	319
12.3.2	The smoothing tautology	320
12.3.3	Deriving the layer system via smoothing	326
12.3.4	Equivalence of the smoothed system?	327
12.3.5	Equivalence of layer dynamics	327
12.3.6	The degeneracy of \mathcal{L} persists to \mathcal{L}'	333
12.3.7	Exponential sensitivity, contraction and determinacy- breaking	334
12.3.8	The canopy as a series expansion	335
12.4	Pinching	338
12.4.1	Extrinsic pinching	341
12.4.2	Intrinsic pinching	344
12.5	Intermediary Agents	348
12.6	Looking forward	350
13	Four obsessions of the Two-Fold Singularity	353
13.1	The generic two-fold — a summary	354
13.2	Obsession 1: The prototype in n dimensions	357
13.2.1	The visible two-fold	359
13.2.2	The visible-invisible two-fold	360
13.2.3	The invisible two-fold	361
13.2.4	Geometry of the angular jump parameter $\nu^+\nu^-$	363
13.3	Obsession 2: The nonsmooth diabolo	365
13.3.1	First return map: the skewed reflection	365
13.3.2	The rotation map	367
13.3.3	Number of crossings	369
13.3.4	The Nonsmooth Diabolo	376
13.3.5	The nonsmooth diabolo bifurcation	378
13.4	Obsession 3: The folded bridge	383
13.4.1	The visible two-fold	385
13.4.2	The visible-invisible two-fold	386
13.4.3	The invisible two-fold	387
13.4.4	The nonsmooth diabolo bifurcation: sliding	388
13.5	Obsession 4: Sensitivity in the layer	390
13.5.1	The unperturbed system	391
13.5.2	The perturbed system	393
13.6	An unfinished saga	401

14 Applications from Physics, Biology, and Climate	405
14.1 In control: steering a ship.....	406
14.2 Ocean circulation.....	408
14.3 Chaos in a church.....	417
14.3.1 ‘Lumped water’ model.....	418
14.3.2 ‘Moving point’ model.....	419
14.3.3 ‘Discrete kick’ model.....	421
14.4 Explosion in a superconducting stripline resonator.....	423
14.5 Conical refraction.....	431
14.6 Optical folded billiards.....	436
14.7 Static versus kinetic friction.....	441
14.8 A paradox of skipping chalk.....	449
14.9 Pinching neurons.....	455
14.9.1 Relaxation oscillations and canards.....	456
14.9.2 Local geometry of the canard singularity.....	458
14.9.3 The first pinch: a shot in the dark.....	462
14.9.4 The second pinch: zooming in on the manifolds.....	463
14.9.5 The third pinch: catching the canards.....	465
14.10 Looking forward.....	472
A Discontinuity as an asymptotic phenomenon ... examples .	473
A.1 Changes of stability.....	474
A.1.1 Large-scale bistability, small-scale decay.....	474
A.1.2 Large-scale bistability, small scale dissipation.....	475
A.2 In Integrals: Stokes’ phenomenon.....	477
A.3 In closing.....	479
B A few words from Filippov & others, Moscow 1960	481
Exercises	497
Bibliography	506
References.....	506
Glossary	517
